ABOUT ME

Associate Tech Lead and hands-on full-stack engineer with 6+ years of experience architecting and shipping **0-to-1, multi-tenant Software as a Service (SaaS) products**. Builds secure backend systems and data-intensive user experiences using **TypeScript, Ruby on Rails, React, PostgreSQL, MongoDB, Elasticsearch, Redis, and Amazon Web Services (AWS)**. Progressed from intern to Associate Tech Lead at AlmaConnect by owning products from data model and system architecture through production delivery, including distributed systems processing **1.2B+ jobs per month** and search optimizations across **37M records**.

SKILLS

Languages: TypeScript, JavaScript, Ruby, Python, SQL, HTML, CSS

Backend & APIs: Hono, Node.js, Ruby on Rails, Representational State Transfer (REST) APIs, TypeORM, service-oriented architecture, microservices

Frontend: React, Next.js, Redux Toolkit, Jotai, Vite, Linaria, Chrome Extensions

Databases & Search: PostgreSQL, MongoDB, Elasticsearch, Searchkick, Redis, PgBouncer

Distributed Systems & Cloud: BullMQ, Sidekiq Pro, Amazon Web Services (AWS), Docker, CloudFormation, Ansible, CircleCI, Continuous Integration/Continuous Delivery (CI/CD)

Artificial Intelligence & Tooling: OpenAI APIs, Sentence-Transformers, DistilBERT, PyTorch, TensorFlow, Claude Code, Cursor, Git, GitHub, Bugsnag, New Relic

PROFESSIONAL EXPERIENCE

Associate Tech Lead | AlmaConnect — Remote, India

July 2026 – Present

- Architected and built **R3, AlmaConnect's next-generation multi-tenant prospect Customer Relationship Management (CRM) platform**, as a TypeScript Nx monorepo using Hono, Awilix, React, PostgreSQL 16, Redis, and BullMQ.
- Designed **schema-per-workspace tenancy** with a shared core schema and transaction-local PgBouncer routing, isolating customer data while retaining efficient pooled database access.
- Built a resilient **Karmabox-to-R3 synchronization pipeline** connecting MongoDB and Sidekiq to PostgreSQL and BullMQ through HMAC-signed webhooks, durable events, idempotent processing, stale-update fencing, and automated recovery.
- Delivered **native custom and Artificial Intelligence (AI) reports** using the OpenAI Responses API, nested query-builder filters, deterministic legacy-report migration, and fail-closed parameterized PostgreSQL execution.
- Engineered a **fault-tolerant export pipeline** using 500-record fan-out jobs, atomic collection, HMAC-secured downloads, bounded retries, and production diagnostics through structured logging and Bugsnag.
- Defined **architectural boundaries and engineering standards** across HTTP and worker runtimes, including strict TypeScript, request-scoped dependency injection, stable API error contracts, integration testing, and documentation-led delivery.

Senior Software Engineer | AlmaConnect — Remote, India

April 2023 – June 2026

- Led end-to-end development of **AlmaNews**, a Ruby on Rails and React news-intelligence platform aggregating data from **400,000+ global sources** and tracking **25M+ prospects**.
- Architected a distributed Sidekiq Pro news-scanning backend processing **1.2B+ background jobs per month** with fault-tolerant workflows, retries, monitoring, and operational controls.
- Replaced application-side MongoDB processing with optimized aggregation pipelines, reducing latency by **30%+** across hot-path queries and accelerating high-cardinality aggregations by **up to 8x**.
- Redesigned Elasticsearch and Searchkick indexing for **37M records**, reducing index storage by **41% from 2 TB to 1.18 TB** and cutting end-to-end indexing time by nearly 50%.
- Owned **React frontend architecture** for multi-tenant, data-intensive directories with role-based access, complex filters, pagination, reporting, and bulk import/export workflows.
- Built applied Artificial Intelligence (AI) and Natural Language Processing (NLP) capabilities with OpenAI, Sentence-Transformers, DistilBERT, PyTorch, and Python for **article summarization, semantic clustering, and 11-class content classification**.

Software Engineer | AlmaConnect — Remote, India

September 2020 – March 2023

- Re-architected feed generation into a **personalized system driven by user interests and social graphs**, improving content relevance across the alumni platform.
- Built a **no-code static website builder** for non-technical clients, reducing service and maintenance effort by approximately **90%** and growing adoption from **16 to 118 active sites**.
- Co-developed a mentorship discovery platform and **owned features from design through production support**, including implementation, testing, documentation, and deployment.

Software Engineer Intern | AlmaConnect — Remote, India

January 2020 – August 2020

- Built internal administrative tooling and delivered **full-stack features** across Ruby on Rails, JavaScript, and React applications.
- Developed **client-facing React websites** in collaboration with product and design teams.

SELECTED TECHNICAL PROJECTS

Public News Feed | *Next.js 14, React 18, REST APIs, Search Engine Optimization*

- Built server-rendered organization news feeds with dynamic metadata, Open Graph tags, per-organization routes, and an API-driven Extensible Markup Language (XML) sitemap with hourly revalidation.
- Designed hybrid server-side rendering and client-side rendering (SSR/CSR), routing authenticated users to the React application while keeping public content optimized for search engines.

Seth Natural Language Processing Service | *Python, Flask, PyTorch, Sentence-Transformers*

- Built a production Natural Language Processing (NLP) service for semantic article clustering and 11-class emotion/content classification using Sentence-Transformers and a fine-tuned DistilBERT model.
- Deployed concurrent inference with Flask, Gunicorn, Docker, and optional Graphics Processing Unit (GPU) acceleration.

Caerus Browser Extension | *React 18, Webpack 5, Chrome Extensions*

- Built a multi-site Chrome extension that scraped **50+ news sources** using configurable parallel tabs, domain-specific content scripts, duplicate prevention, and stale-tab recovery.
- Maintained **18+ versioned releases** while integrating browser-side extraction with AlmaNews ingestion APIs.

AlmaConnect Cloud Infrastructure | *AWS, Docker, Ansible, CloudFormation, CircleCI*

- Supported Infrastructure as Code (IaC) and Continuous Integration/Continuous Delivery (CI/CD) for multi-service deployments spanning Amazon Elastic Container Service (ECS), MongoDB replica sets, Elasticsearch, Redis, Amazon S3, and CloudFront.
- Worked with Docker-based services, environment-specific Ansible roles, CloudFormation stacks, monitoring, and automated release pipelines.

EDUCATION

Dhirubhai Ambani Institute of Information and Communication Technology | Gandhinagar, India

Bachelor of Technology (B.Tech.) in Information and Communication Technology

2016 – 2020

ADDITIONAL ACADEMIC PROJECTS

Plant Disease Detection | *Python, Keras, TensorFlow, PostgreSQL*

- Built a rotation-invariant 3D Convolutional Neural Network (CNN) training pipeline for plant-disease classification, achieving **approximately 81% accuracy**.

Assistive Sound Classification | *Java, Android, Python, Keras, TensorFlow*

- Developed a real-time Android accessibility application using microphone capture, Fast Fourier Transform (FFT) feature extraction, spectrogram generation, and on-device Convolutional Neural Network (CNN) inference.
